

Recycling Stats April 2015

The first step in the E-waste recycling process is dismantling.

Initial dismantling is completed by hand on assets such as computers, monitors, televisions and other similar equipment that is easily taken apart. This produces the highest degree of material separation possible.

Dismantling involves removing the following:

- Hard Drives, printed circuit boards, motherboards
- Light and dark plastics (exterior housings and interior components)
- Wooden cabinets from TVs
- Ferrous metals
- Aluminum and other nonferrous metals
- Wire
- Copper yokes from CRTs
- And more!
